SUMMARY

Backend-focused engineer currently building on Supabase/PostgreSQL (Row-Level Security, SECURITY DEFINER functions, pg_cron scheduled jobs) and Next.js Server Actions at Astra, including a multi-tenant data model for a recruiter-facing B2B product. Real Java/Spring Boot backend experience: built LedgerGuard, a real-time financial reconciliation engine streaming transactions through Kafka and matching them in a Redis-backed sliding window. Prior production backend experience on YES Bank's OMNI trading platform, serving 20,000+ daily trades. IIT Madras Global Hyperloop DesignX winner; Flipkart GRiD 7.0 national semifinalist.

EXPERIENCE

Astra

Founding Engineer

Sep 2026 – Present

Bengaluru, India (On-site)

- Backend work on Supabase (PostgreSQL, Row-Level Security as the security boundary, SECURITY DEFINER functions, pg_cron scheduled jobs); designed a multi-tenant data model for multiple recruiter organizations on one surface and a consent-gated messaging flow for a new recruiter-facing B2B area.
- Designed a typed mock service layer to build and review UI ahead of the backend; follows feature-scoped module conventions with type-check and lint gates.

YES Securities (YES Bank)

Full Stack Developer Intern

Jan 2026 – Aug 2026

Bengaluru, India

- Shipped 5+ production backend features (Node.js, REST APIs) on the OMNI trading platform serving 20,000+ daily trades; refactored backend microservices, cutting average API latency ~25%.
- Diagnosed N+1 query bottlenecks and redesigned database schemas, cutting query time ~35%; streamlined CI/CD across 3 backend microservices.

PROJECTS

LedgerGuard: Real-Time Financial Reconciliation Engine | GitHub

2026

- Java 17 / Spring Boot 3 engine streaming transactions from two ledger sources through Apache Kafka (KRaft), matching them in a Redis-backed sliding window within seconds; streaming statistics (Welford's algorithm + z-score) distinguish systemic failures from noise. PostgreSQL audit log, Spring WebSocket dashboard.

CodeGraph: GraphRAG Memory Layer for AI Coding Agents | GitHub

2026 – Present

- Backend platform integrating a 9-language parsing pipeline (tree-sitter), a DuckDB entity/edge graph, and a hybrid ranking engine, exposed as a 9-tool API over MCP; cuts client context usage 9.6x.

EDUCATION

Vellore Institute of Technology

B.Tech, Computer Science & Engineering

2022 – 2026

Vellore, Tamil Nadu, India

ACHIEVEMENTS

Winner: Global Hyperloop Competition (Asia's First), IIT Madras

2025

- AI & Software Lead, Team Levitate (VIT): led the software workstream within a cross-functional engineering team under competition deadlines; team won the DesignX trophy and 5 category awards against 15+ international teams.

National Semifinalist: Flipkart GRiD 7.0

2025

SKILLS

Backend: Java, Spring Boot, Node.js, Express.js, FastAPI, Apache Kafka, REST APIs, Microservices

Data: PostgreSQL, Supabase, Row-Level Security, MongoDB, Redis, Schema Design

Cloud & DevOps: Vercel, AWS, Docker, CI/CD, pg_cron

Fundamentals & Tools: Data Structures & Algorithms, OOP, Git, Agile
